

CABLE LOCK

SET YOUR OWN COMBINATION

Your new lock is preset at the factory to unlock at 0-0-0, even if the dials show another number. Make sure you are able to open and close the lock prior to setting your own combination. Carefully follow each step to ensure proper setting procedures.

1. Hold the lock so the black dots between the dials are facing you. Dials should be set at the opening combination.

Slide the cable tip (A) to the left and then pull upward to release the cable.

2. Using a pen or like object, press and hold the button (C) in the direction of the arrow. Continue holding until completing the next step.

Set the dials (B) to any combination you choose. Make sure each number is aligned with the black dots near the dials.

Remember your combination – once the lock is set, there is no way to open it without the combination.

3. Release the button (C). The lock is now ready to be used. Reinsert cable tip (A) into inner hole, push down, hold, and slide right toward outer hole to secure. To change the combination to a different number, repeat steps 1-3.
